

Amendments to the specification:

Please amend the paragraph bridging pages 17-18 as follows:

Therefore, in operation of the device 100, a fluid, such as a rinsing fluid, can be led via the connector 114 into the body 108, and is then led to the chamber 116 via the bores 113 and 112. Through the opening 118, the rinsing liquid then leaks out into the chamber 110, from which it then runs downwardly to the clean the outside of the substrate carrier.
